

DON'T MOVE

A MUSSEL!

Quagga mussels have invaded the inland waterway. Help prevent them from spreading!

Before you leave any lake;

- ❖ **DRAIN the water from the boat, livewell and lower unit.**
- ❖ **CLEAN the hull and remove all plant and animal material.**
- ❖ **DRY and inspect all exposed surfaces*.**

*** Microscopic quagga mussel larvae may still cling to your boat or trailer. To help ensure that you are not spreading invasive species, please allow your equipment to dry for five days before launching someplace else.**
