

Quality Windows and Doors for All Seasons

M-950 Passes Large Missile Impact Testing

April 4, 2011

CHARLEVOIX, MI - Wojan Window & Door Corp. has reached a significant milestone in the evolution of their M-950 product family with models in the series recently passing large missile impact testing. The M-950 Series is a line of commercial aluminum windows Wojan introduced in May of last year. The series launched with AW-rated single-hung and fixed windows, and recently Wojan added a CW-rated horizontal slider version to compliment the SH and fixed products. Blast-resistant models were added in October and now the series rounds out with this new line of impact-resistant windows in both single-hung and fixed configurations. Considering Wojan's expertise as a custom manufacturer, they can also combine attributes and produce highly-rated windows that are both blast- and impact-resistant.

"We have fixed windows in our M-85 line that are impact rated and expected the M-950 models to easily qualify for the same," explains Senior Engineer David Dewey, "They passed with flying colors – and just like the blast windows, can be installed at the jambs only or the head and sill only. We are extremely pleased."

M-950 Fixed and Single-Hung

"This expands the market for the M-950," states industry veteran and Wojan Vice President of Sales Rick Pagano. "In one model, Wojan can now offer an AW-rated blast window, an AW-rated impact window, and a version that's an impact/blast; creating an ideal product for military facilities along the coast."

Testing conducted at Architectural Testing, Inc. in Schofield, WI

M-950 models passing the large missile impact testing were in Single-Hung and Fixed over Fixed configurations. The base and impact models feature a 3¼" frame while the blast and blast/impact versions measure 4¼". Thermally-broken for better overall performance, these models utilize Azo-Brader™ technology which carries a 10-year warranty against failure of the polymer. Typical of the company's entire window line, numerous finishes, accessories and a variety of mulling and stacking options are available.

“This is an enormous accomplishment for Wojan,” adds Pagano. “We are eager to present this to the market and continue to prove why this company has excelled in the commercial building industry for nearly 60 years.”

Founded in 1952, Wojan Window & Door Corp. manufactures quality aluminum windows and sliding glass doors for the U.S. marketplace from facilities in Charlevoix and Coldwater, Michigan. The diverse product line is rated for a variety of commercial and architectural applications. Wojan has been recognized four years in a row by Inc.® Magazine as one of the fastest growing private companies in America. Wojan is a member of AAMA (American Architectural Manufacturers Association), and is a registered provider with AIA/CES (American Institute of Architects Continuing Education System).
