

Quality Windows and Doors for All Seasons

Production Engineer Tim Hruska Joins Wojan Window & Door

Charlevoix, Mich. (March 2012) – Wojan Window & Door, the Charlevoix, Mich.-based commercial window and door manufacturer, has added Tim Hruska as its new Production Engineer. Relocating from the Sacramento area, he joins the company after more than 21 years in the window and glass industries.

Hruska earned his degree in Industrial Engineering from the University of Idaho and throughout his career, has held various positions relating to production planning and business management on both the commercial and residential sides.

Due to an aggressive sales team and the growth that Wojan has enjoyed, the manufacturer exceeded sales goals in 2011. The hiring of Hruska to the newly-created position reflects a company-wide goal of improving efficiencies as they prepare for ramped up production heading into spring.

“Continuing to meet customer commitments,” states Hruska succinctly, “This is my primary focus.”

In the position since February 6th, Hruska’s first six weeks have been busy ones. “I’ve been working closely with purchasing, plant supervisors and company management, evaluating current processes and implementing changes to improve production and better manage our materials inventory,” explains Hruska. With no shortage of work coming in, improvements are rapidly being put into practice in day-to-day operations.

“Tim brings with him not only experience, but serious ideas on ways to help our company as we continue to grow,” says Keith Demeuse, Wojan vice president. “We feel very fortunate to have him.”
